

Your marks : 14 / 15

- ☐ EC2
- ☐ S3
- ☐ Lambda
- ☒ SNS

👉 **Correct!**

- ☒ A serverless compute service
- ☐ A managed relational database service
- ☐ A content delivery network service
- ☐ A cloud storage service

✔ **Correct!**

3. How can AWS Lambda code be packaged if it has external dependencies?

- ☐ By including dependencies in the Lambda console
- ☒ By creating a deployment package with the code and dependencies
- ☐ By uploading dependencies to S3 separately
- ☐ Lambda automatically installs dependencies at runtime

✓ Correct!

4. What AWS service is used to automate code builds and integrations?

- ☐ EC2
- ☐ S3
- ☒ CodeBuild
- ☐ Lambda

✓ Correct!

5. In AWS Lambda, what are layers used for?

- ☒ To share code and data between functions
- ☐ To manage API requests

5. In AWS Lambda, what are layers used for?

- ☒ To share code and data between functions
- ☐ To manage API requests
- ☐ To increase the execution time of functions
- ☐ To monitor function metrics

✓ Correct!

6. Which of the following statements is true regarding AWS Lambda Layers?

- ☐ Each Lambda function can use up to 3 layers
- ☐ Layers can be shared publicly or with specific AWS accounts
- ☒ Both A and B
- ☐ Neither A nor B

✓ Correct!

7. When deploying Lambda code using AWS CodeBuild and GitHub, what is the role of a buildspec.yml file?

- ☐ To specify the Lambda function's trigger events
- ☒ To define build commands and the runtime environment

7. When deploying Lambda code using AWS CodeBuild and GitHub, what is the role of a buildspec.yml file?

- ☐ To specify the Lambda function's trigger events
- ☒ To define build commands and the runtime environment
- ☐ To list the external dependencies of the function
- ☐ To configure the Lambda function's security settings

✓ Correct!

8. What feature of Amazon SNS allows filtering messages to only the interested subscribers?

- ☒ Message filtering
- ☐ Topic partitioning
- ☐ Subscriber segmentation
- ☐ Message tagging

✓ Correct!

9. To use external libraries in an AWS Lambda function written in Python, how should the deployment package be structured?

- ☐ The libraries must be installed globally on the system
- ☒ The libraries should be included in a folder at the root of the deployment package

9. To use external libraries in an AWS Lambda function written in Python, how should the deployment package be structured?

- ☐ The libraries must be installed globally on the system
- ☒ The libraries should be included in a folder at the root of the deployment package
- ☐ External libraries cannot be used within AWS Lambda
- ☐ Libraries must be uploaded separately to AWS S3

✓ Correct!

10. How can AWS Lambda functions be deployed using AWS CodeBuild from a GitHub repository?

- ☐ By manually uploading the ZIP file to Lambda
- ☐ By using AWS CLI to deploy directly from GitHub
- ☒ By setting up a CI/CD pipeline that triggers a build in CodeBuild
- ☐ By configuring Lambda to pull code from GitHub directly

✓ Correct!

11. What is the maximum size of a deployment package for AWS Lambda functions that can be directly uploaded through the AWS Management Console?

- ☒ 50 MB
- ☐ 10 MB

11. What is the maximum size of a deployment package for AWS Lambda functions that can be directly uploaded through the AWS Management Console?

- ☒ 50 MB
- ☐ 10 MB
- ☐ 75 MB
- ☐ 100 MB

✗ **Incorrect!**
10 MB is the correct answer

12. Which AWS service can be integrated with AWS Lambda to create a serverless workflow?

- ☐ Amazon EC2
- ☐ Amazon S3
- ☒ AWS Step Functions
- ☐ Amazon RDS

✓ **Correct!**

13. In the context of AWS Lambda and external dependencies, what is a common practice to reduce deployment package size?

- ☐ Increasing the timeout setting of the Lambda function

13. In the context of AWS Lambda and external dependencies, what is a common practice to reduce deployment package size?

- ☐ Increasing the timeout setting of the Lambda function
- ☐ Using environment variables to store dependencies
- ☒ Including only the necessary files and dependencies
- ☐ Uploading dependencies to Amazon S3 and referencing them in the Lambda function

✓ Correct!

14. When using AWS CodeBuild with GitHub for Lambda deployments, which of the following is essential for automating the deployment process?

- ☒ A webhook in GitHub to trigger CodeBuild on push events
- ☐ Direct access to the GitHub repository from the Lambda console
- ☐ Manual approval steps for every build process
- ☐ A dedicated EC2 instance to host the build environment

✓ Correct!

15. What is an advantage of using Amazon SNS with Lambda functions?

- ☐ It allows Lambda functions to operate in VPCs without additional configuration

deployment process?

- ☒ A webhook in GitHub to trigger CodeBuild on push events
- ☐ Direct access to the GitHub repository from the Lambda console
- ☐ Manual approval steps for every build process
- ☐ A dedicated EC2 instance to host the build environment

✓ Correct!

15. What is an advantage of using Amazon SNS with Lambda functions?

- ☐ It allows Lambda functions to operate in VPCs without additional configuration
- ☒ It enables asynchronous invocation of Lambda functions through message passing
- ☐ It increases the maximum execution time of Lambda functions
- ☐ It reduces the cost of Lambda function executions

✓ Correct!
